

EMS Cases

:: Product Description

Very small weight: EMS flight cases are made from durable polycarbonate, light weight and very strong!

Grows with your needs: you start with a 6U version, when your audio installation grows, you can simply buy 1 or 2 extension kits to transform your original 6U case in 9U or even 12 units.

All kinds of adapters: you start with a basic, closed 19" rack. After some time you wish to add a disco mixer horizontally. No problem: just add an A.MIX adapter to make the installation possible.

Easy to assemble: On delivery the small 3U version is ready to use. The larger cases are pre-assembled and can be build together in a very short time (all instructions included).

3 versions available:

EMS PC-400: low cost version using plastic catches to open/close the case (depth= 40cm)

EMS 400: standard version using metal butterfly catches to open/close the case (depth= 40cm)

EMS 500: standard version using metal butterfly catches to open/close the case (depth= 50cm)
